Sample Anatomical Exam Questions and Explanations

Below are examples of common question types with explanations to aid understanding:

Multiple Choice Question

Question: Which of the following muscles is primarily responsible for flexion of the forearm at the elbow?

- A) Biceps brachii
- B) Triceps brachii
- C) Deltoid
- D) Latissimus dorsi

Answer: A) Biceps brachii

Explanation: The biceps brachii is the main flexor of the elbow joint, while the triceps is responsible for extension. Deltoid and latissimus dorsi have different functions related to shoulder movements.

Diagram Labeling Question

Question: Identify the structure labeled 'A' in the diagram of the human heart.

(Assuming a diagram with labels)

Answer: The structure labeled 'A' is the right atrium.

Explanation: The right atrium receives deoxygenated blood from the body via the superior and inferior vena cavae. Recognizing anatomical diagrams requires familiarity with the heart's external features.

Case-Based Question

Question: A 45-year-old man presents with weakness in his right arm and difficulty speaking. Imaging shows an infarct in the left middle cerebral artery territory. Which brain structure is most likely affected?

Answer: The primary motor cortex in the precentral gyrus of the left frontal lobe.

Explanation: The motor cortex controls voluntary movements, and its damage can cause contralateral weakness. Understanding neuroanatomy is essential for interpreting such clinical scenarios.
