Sample Answers and Solutions for Chapter 7 Projects

Sample Data Scenario

Suppose the project involves managing a sales report that tracks monthly sales across different regions. The dataset includes columns like Region, Salesperson, Month, Sales Amount, and Product Category.

Key Tasks and Their Solutions

- **Calculating Total Sales:**

Use the SUM function:

=SUM(D2:D100)

where D2:D100 contains sales amounts.

- Creating a VLOOKUP to Find Salesperson Name:

Suppose you have a cell with a salesperson ID, and you want to find their name:

=VLOOKUP(A2, 'Salesperson List'!A:B, 2, FALSE)

ensuring the lookup table has IDs in column A and names in column B.

- Applying Conditional Formatting to Highlight Low Sales:

Select the sales data, go to Conditional Formatting > Highlight Cell Rules > Less Than, and enter a threshold (e.g., 5000). Choose a format (like red fill).

- Creating a PivotTable to Summarize Sales by Region and Month:

Insert a PivotTable, drag 'Region' to Rows, 'Month' to Columns, and 'Sales Amount' to Values. This summarizes total sales per region per month.

- Using IF Statements to Categorize Sales Performance:

For example, in a new column, input:

=IF(D2>=10000, "Excellent", IF(D2>=5000, "Average", "Needs Improvement"))

Answer Verification Tips

Students should cross-check formulas for accuracy, ensure cell references are correct, and verify data ranges. Using the formula auditing tools in Excel can also help identify errors.
