His doctoral dissertation, completed in 1898, set the stage for his lifelong exploration of learning and behavior.

Contributions to Psychology

The Law of Effect and Learning Theory

Thorndike's most famous contribution is the formulation of the Law of Effect, which states that behaviors followed by satisfying consequences are more likely to be repeated, while those followed by unpleasant outcomes are less likely to recur. This principle laid the foundation for operant conditioning and significantly influenced later behaviorist theories.

Through a series of experiments with puzzle boxes and animals, primarily cats, Thorndike demonstrated how trial-and-error learning occurs naturally. His meticulous observations led to the

development of quantitative measures of learning, such as the number of trials needed for an animal to escape a puzzle box.

Educational Psychology and Applications

Thorndike's research extended beyond animal behavior to human education. He believed that learning could be measured objectively and sought to create standardized assessments for student achievement. His work emphasized the importance of practice, reinforcement, and the development of educational materials aligned with how humans learn naturally.

Some of his notable contributions include:

- Development of the first standardized educational tests
- Advocacy for individualized instruction based on measurable progress
- Introduction of the concept of transfer of learning

Personal Life and Relationships

Marriage and Family

Despite his groundbreaking work, Thorndike's personal life was marked by stability and devotion. He married Elizabeth E. Scott, a fellow psychologist and educator, in 1900. Their partnership was both personal and professional, collaborating on various research projects and sharing a mutual dedication to advancing educational psychology.
