Answer:

Diagram: (In actual question papers, a diagram of a three-phase induction motor is included.)

Explanation:

A three-phase induction motor operates on the principle of electromagnetic induction. When three-phase AC supply is fed to the stator windings, it produces a rotating magnetic field. This magnetic field induces currents in the rotor conductors (either squirrel cage or wound type), creating a secondary magnetic field. The interaction between the stator's rotating magnetic field and the rotor currents produces a force, causing the rotor to turn and follow the rotating magnetic field, thus converting electrical energy into mechanical energy.
