- **Answer Lab Questions:** Use evidence gathered from the simulation to respond accurately to questions provided in the virtual environment.

Sample Questions and Their Answers

- **Q:** Why does a plant bend toward light in phototropism?
- **A:** Because auxin accumulates on the shaded side, promoting cell elongation that causes bending toward the light source.
- **Q:** What role does gravity play in root growth?
- **A:** Gravity directs roots downward through gravitropism, ensuring they reach water and nutrients in the soil.
- **Q:** How do plants respond to touch in thigmotropism?
- **A:** Mechanical stimulation causes differential growth, leading tendrils or vines to coil around supports.
