Sample Unit 4 Microeconomics Test Questions and Answer Key

Below is a collection of common questions from Unit 4 assessments, along with detailed answer explanations to aid your understanding.

Question 1: What is the primary characteristic of perfect competition?

- Few sellers dominate the market
- Products are differentiated
- Many buyers and sellers with identical products
- High barriers to entry

Answer: 3. Many buyers and sellers with identical products

Explanation: Perfect competition is characterized by a large number of small firms selling identical products, with free entry and exit from the market. This leads to price takers who cannot influence market prices.

Question 2: How does a decrease in demand affect the market equilibrium price and quantity?

- Price increases, quantity decreases
- Price decreases, quantity decreases
- Price remains the same, quantity increases
- Price decreases, quantity increases

Answer: 2. Price decreases, quantity decreases

Explanation: A decrease in demand shifts the demand curve leftward. This results in a lower equilibrium price and a reduced quantity exchanged in the market.

Question 3: Which of the following best describes elastic demand?

- Quantity demanded responds significantly to price changes
- Quantity demanded is unaffected by price changes

- Demand is perfectly inelastic
- Demand is perfectly elastic

Answer: 1. Quantity demanded responds significantly to price changes

Explanation: Elastic demand means consumers are sensitive to price changes; a small price change causes a large change in quantity demanded.

Question 4: In a monopoly, what is the primary source of market power?

- High production costs
- Exclusive ownership of a key resource or patent
- Government regulation
- Many competitors offering similar products

Answer: 2. Exclusive ownership of a key resource or patent

Explanation: Monopolies often arise due to barriers such as patents, resource control, or legal restrictions that prevent other firms from entering the market.

Question 5: What does the price elasticity of demand coefficient greater than 1 indicate?

- Demand is inelastic
- Demand is elastic
- Demand is unit elastic
- Demand is perfectly inelastic

Answer: 2. Demand is elastic

Explanation: A coefficient greater than 1 indicates that the percentage change in quantity demanded exceeds the percentage change in price, signifying elastic demand.

Analyzing the Typical Questions and Corresponding Answer Keys

Sample Questions and Correct Responses

To illustrate the nature of questions and the importance of a precise answer key, consider the following examples:

Question 1:

If the price elasticity of demand for a product is 0.5, what does this imply about consumer responsiveness to price changes?

Answer:

The demand is inelastic; consumers are relatively unresponsive to price changes (correct answer: demand is inelastic).

Question 2:

In the context of consumer choice theory, what does an indifference curve represent?

Answer:

A set of bundles that provide the consumer with the same level of utility.

Question 3:

Calculate the price elasticity of demand given the following data: when price increases from \$10 to \$12, quantity demanded decreases from 100 units to 80 units.

Answer:

$$\text{Elasticity} = [(Q_2 - Q_1)/Q_1] \div [(P_2 - P_1)/P_1] = [(80 - 100)/100] \div [(12 - 10)/10] = (-20/100) \div (2/10) = -0.2 \div 0.2 = -1$$

The absolute value indicates unit elasticity.

Each question's answer in the key must precisely match the expected response, including units, calculations, and conceptual explanations.
