Cost Behavior and Classification

Question: Explain the difference between fixed and variable costs and provide two examples of each in an airline company.

Answer Outline:

- Fixed costs remain constant regardless of activity level (e.g., aircraft lease payments, salaries of administrative staff).
- Variable costs change in direct proportion to activity (e.g., fuel costs, maintenance supplies).

Break-Even Analysis

Question: A regional airline has fixed costs of \$500,000 per month. The average contribution margin per flight is \$200. How many flights must they operate to break even?

Solution:

Number of flights = Fixed costs / Contribution margin per flight = $500,000 / 200 = 2,500$ flights.

Budget Variance Analysis

Question: During a quarterly review, the airline's actual maintenance costs were \$150,000, but the standard cost was \$140,000. Calculate the spending variance and discuss potential causes.

Answer:

Spending Variance = Actual - Standard = $150,000 - 140,000 = \$10,000$ unfavorable.

Potential causes include increased labor rates, unexpected repairs, or supplier price increases.

Activity-Based Costing Application

Question: Describe how ABC can provide more accurate product costing in the context of airline ticket pricing.

Answer:

ABC assigns costs based on actual activities driving expenses, such as check-in processing, baggage handling, or in-flight services. This leads to more precise cost information per route or service, enabling better pricing strategies and profitability analysis.
